

Dark Room Trash

A Study in Discard

This book is a curation of the contents of a darkroom trash can. Neither found photography nor intentional creation, the images exist somewhere in between. Many of these photographs never saw the light. Their potential and full chemical development were only realized through my exploration of the material as I collected and assembled them into a book, exposing them to light in the process. The book was exhibited at the MoMA PS1 Art Book Fair in 2025.

Trinity in 50

Detail Studio

Trinity in 50 tells the story of Trinity College Dublin through fifty objects chosen by students, staff, and alumni that reflect the institution's storied past. I assisted Al Higgins in photographing the selected items, including the historic Blue Clock above the Front Gate, once synchronized to Dublin Mean Time, and the cobblestone path, partially paved over nearly 100 years ago, that leads students through the institution. Each image carries its own story and interpretation of Trinity's past, and the book reflects the many perspectives that have passed through the Front Gate since the university's founding in 1592. Images and text were carefully aligned so that each object had its own space to speak clearly, collectively building a portrait of the institution and its layered history. The project's careful approach to storytelling and design was recognized with an ICAD award.

Ergonomic Hammer Art

Sculptre TA, Oberlin

During my time as the sculpture TA where I oversaw the sculpture lab and woodshop, a beloved space filled with well-used tools and paint-splattered stools. I began a small project that eventually became known to the students as Ergonomic Hammer Art. Wanting to give these objects another life, I hand-whittled new grips from shop scraps, sanding and shaping each one to fit more comfortably in students' hands, then polished and reassembled the hammer heads to upgrade rather than replace them. I did the same with our stools, stripping back the old finish and giving them a cosmetic update using the laser cutter etching images of the shop, its tools, and even the safety signage I had created onto them. I invited students to contribute their own designs, making the space feel more shared and cared for, and encouraging a studio culture where everyone felt responsible for keeping it alive and usable. Many of the ergonomic hammers were eventually “shoplifted” by students, something I can only take as a compliment and though I wish I had better photos, the project remains one of my favorites I created in the shop.

Ramy Brook

Marketing Intern

As a marketing intern at Ramy Brook, I worked closely with the art director to create visual assets across email, social media, and digital campaigns. I supported graphic design and photo editing needs, helping shape seasonal campaigns that stayed true to the brand’s color palette, typography, and overall aesthetic. My goal was always to make the layouts visually clear and engaging while enhancing the stories each campaign aimed to tell.

Mad River

A Film

Mad River was an incredible project to be part of. I was lucky to serve as the art director for my friend Rowan's film, an ode to his family's land in Northern California. Inspired by the landscape and the film's quietly powerful narrative, I developed a visual language and identity that guided the project from its earliest stages through fundraising and outreach, festival submissions, and its life in the public eye. I shaped a palette drawn from natural light and terrain and paired it with typography that echoed the film's softness and grit, lending the work a grounded, cinematic feel. I assembled materials and selected and curated frames to reflect the film's expansive, expressive sense of place.

ONE Pilates

Detail Studio

Through my work with Detail Studio, I had the opportunity to help develop visual assets for ONE Pilates, a new studio focused on movement and flow. This project was especially meaningful to me because it marked my first sustained experience working with typography. What initially felt unfamiliar quickly became confidence-building and creatively expansive. I worked on imagery and graphics for social media, shaping a visual language drawn from the studio's symbols and philosophy. By exploring type as form and integrating it seamlessly into images, I developed an aesthetic grounded in clarity, movement, and calm.

Tech A

In Class Project

This semester in Technology A was my first experience learning to code, and it opened up an entirely new way of thinking about systems, storytelling, design, and data. At its core, this class became, for me, about exploring the connective tissue of the world around us, the intangible systems and rhythms that quietly shape daily life made visible through data, interaction, and the technologies at our fingertips. My first project transformed the manual for a tide clock I had repaired into a website, balancing the tiny mechanical details of coding and clock systems with the larger celestial rhythms that govern the device. (A,B,C) From there, continuing to explore the unseen systems that structure daily life, I created an interactive world map visualizing New York City's food imports. This project allowed users to directly engage with information about how everyday food items arrive where they do, including their global journeys and associated costs. (D) For my final project, Drawing Time,(E) I built an interactive camera using physical computing to record and composite data over a set period, creating a portrait of a specific space and moment in time. Across these projects, I found a clear throughline: mapping and measurement, understanding how things arrive where they are, and moving between the enormous and the minute to build a thoughtful design practice rooted in close attention and curiosity. Building on the themes of the course, this work reflects an ongoing exploration of the balance between technological interaction and the power of data.

Senior Thesis

Instalation

In my senior thesis showcase I explored how images construct intimacy, distance, voyeurism, and narrative in a world saturated with screens. Asked viewers to physically engage with the work. For the exhibition, I extended this inquiry by bringing my photographs into physical form. Images of my family during the COVID pandemic were printed and etched into wood, canvas, leather, glass, and other materials. (B)

A custom lightbox system I designed was housed inside a column that echoed those in the gallery, (A) turning it into a miniature picture window that viewers could peer into (D). I also created a series of freestanding sculptures built from the spaces between figures in my photographs, (E) the cutouts of negative space, each around four feet tall and deliberately awkward to navigate.

Grounded in experimental photographic processes and expanded through my study of sculpture, the exhibition became both playful and intimate, asking viewers to physically interact with the work (C) while reflecting on the past four years and my continued interest in how images occupy space, time, and attention.

Column with peep holes
